

# Bug & Tick Spray

All Natural  
Anti-Insect Spray

Small Batch | Organic | All Natural

Our exclusive blend of essential oils, artfully combined with a blend of all natural carrier oils creates a super fresh scent to effectively repel creatures, naturally that's good for your skin. For application, simply mix the contents by shaking, then spray area or apply directly to hands and onto skin, rubbing in as needed.

BY's Apitherapy only uses natural products that are designed using ingredients derived from plants, minerals, or other natural sources. These products often aim to be more sustainable and gentler on the environment and the body compared to synthetic alternatives. Using natural products offers numerous benefits, including being gentler on the skin, reducing exposure to harmful chemicals, and having a positive environmental impact. Natural products often contain beneficial nutrients and antioxidants, supporting skin health and well-being.

## Raw Neem Oil

Proven effective in killing tick larvae and may be effective in killing adult ticks on contact. When insects come into contact with neem oil, it also prevents the bug from transforming into its next stage of development by disrupting regulatory hormones.

## Raw Castor Oil

Used as a natural insect repellent, particularly for repelling certain types of insects and burrowing animals. It is a common ingredient in some natural bug sprays and can be effective against flies, mosquitoes, and wasps.

## Lemongrass Oil

Lemongrass oil's strong aromatic compounds interfere with insects' ability to detect hosts. It's proven to repel ticks, mosquitoes, and other biting insects, offering a natural alternative to chemical repellents.

## Argan Oil

While not a direct insect repellent, argan oil is rich in vitamin E and linoleic acid, which help soothe and reduce inflammation from insect bites. Its nourishing properties support skin healing and comfort after bites.

## Lavender Oil

Lavender oil contains linalool and linalyl acetate, compounds known to repel mosquitoes, flies, moths, fleas, and ticks. It also provides a calming aroma, making it a popular choice for gentle insect protection.

## Cedarwood Oil

Cedarwood oil acts as a natural insect repellent, deterring ticks and various pests through its active ingredient cedrol. It's a sustainable, plant-based option for keeping bugs at bay without harsh chemicals.

## INGREDIENTS

Distilled Water, virgin, raw neem oil, virgin, raw castor oil, argan oil, steamed lemongrass oil, cedarwood essential oil, lavender essential oil, propylene glycol(vegetable based), polysorbate 20 (coconut based)

## DIRECTIONS

For application, simply mix the contents by shaking, then spray area or apply directly to hands and onto skin, rubbing in as needed.
